35 - 44

45 - 54

Over 55

Attrition rate is a metric that helps companies identify ways to retain productive employees. The rate of attrition is calculated in proportion to the total employee count in the organisation.

Employee Attrition Rate:

The employee attrition rate is the percentage of employees who leave a company in a specific period. It could be monthly, quarterly or annually. The cause for leaving the company could be retirement, illness, better job opportunities or personal reasons. The attrition rate helps you to understand the rate of permanent or semipermanent loss of employees, which can impact a business. The employee attrition rate is also referred to as the churn rate.

Causes of Attrition:

- Relocation
- Medical emergencies
- Family requirements
- Retirement
- Termination
- Reorganisation
- Transfers
- Downsizing
- Layoff

Method to Calculate Employee Attrition Rate:

For example, consider that you are calculating the annual attrition rate for a company that has 200 employees at the beginning of the year. Over the course of the year, 18 employees leave and 10 employees are hired. The steps to calculate the attrition rate for the year are to first subtract the number of employees who left from the number of new hires to arrive:

$$200 - 18 = 182$$

$$182 + 10 = 192$$

Then, add the number of employees at the start of the period to the total:

$$200 + 192 = 392$$

Next, divide the total by two to get your employee average:

$$392 / 2 = 196$$

The next step in calculating the attrition rate is to divide the number of employees who left by the employee average to arrive at a decimal:

$$18 / 196 = 0.0918$$

Finally, multiply the decimal by 100 to get the rate of attrition as a percentage:

$$0.0918 \times 100 = 9.18\%$$

1. Add a image background

2. Take a visual card and put a employee count column(Over all employee)

3. Create a new column for Attrition count

Attrition Count = $\text{IF}(\text{'HR data' [Attrition]} = \text{"Yes"}, 1, 0)$

4. Take a visual card and put a Attrition count column

5. Create a new measure, take a card visual and put a Attrition Rate measure

Attrition Rate = $\text{SUM}(\text{'HR data' [Attrition Count]}) / \text{SUM}(\text{'HR data' [Employee Count]})$

6. Create a new measure, take a card visual and put a Active employees measure

Active Employees = $\text{SUM}(\text{'HR data' [Employee Count]}) - \text{SUM}(\text{'HR data' [Attrition Count]})$

7. Take a visual card and put a Age column and in fields convert **Sum** into **Average**

8. Take a tree map visual and add department column in **Category** and sum of attrition count column in **Values**

9. Take a Clustered column chart and add CF-age band column in **X-axis** and age column in **Y-axis** and Gender in **Legend**.

Create a new column called sorting age:

Sorting age = $\text{IF}(\text{'HR data' [CF_age band]} = \text{"Under 25"}, 1, \text{IF}(\text{'HR data' [CF_age band]} = \text{"25 - 34"}, 2, \text{IF}(\text{'HR data' [CF_age band]} = \text{"35 - 44"}, 3, \text{IF}(\text{'HR data' [CF_age band]} = \text{"45 - 54"}, 4, 5)))$

Select the clustered column chart and in **column tools**----> **Sort by column**----> select column sorting age.

10. Take a waterfall chart and add a Educational field in **Category** and sum of Attrition count in **Values**

11. Take a matrix visual in visualization and in **Rows field** add Job role and in **Columns field** add job satisfaction and in **values field** add Employee count(M)

12. Take a Pie chart in visualization and add in **Legend field** add Gender column and in **Values** add sum of attrition count and add CF age band column in **Details field**. Add CF age band column in filters pane and also apply filter for **under 25**

13. Again add a pie chart in visualization and in **Legend field** add Gender column and in **Values** add sum of attrition count and add CF age band column in **Details field**. Add CF age band column in filters pane and also apply filter for **25 -34**

14. Again add a pie chart in visualization and in **Legend field** add Gender column and in **Values** add sum of attrition count and add CF age band column in **Details field**. Add CF age band column in filters pane and also apply filter for **35-44**

15. Again add a pie chart in visualization and in **Legend field** add Gender column and in **Values** add sum of attrition count and add
